

CS221 Spring 2024: Artificial Intelligence: Principles and Techniques

Homework 4: Controlling MountainCar

SUNet ID: [your SUNet ID]
Name: [your first and last name]
Collaborators: [list all the people you worked with]

By turning in this assignment, I agree by the Stanford honor code and declare that all of this is my own work.

In route planning, the objective is to find the best way to get from point A to point B (think Google Maps). In this homework, we will build on top of the classic shortest path problem to allow for more powerful queries. For example, not only will you be able to explicitly ask for the shortest path from the Gates Building to the Green Library Coupa Cafe, but you can ask for the shortest path from Gates back to your dorm, stopping by the package center, gym, and the dining hall (in any order!) along the way.

Before you get started, please read the Assignments section on the course website thoroughly.

Problem 1: Value Iteration
